
Virtualisation Readiness Service

Do you need to virtualise your entire infrastructure? The answer can be a yes, a no, and can be a mixture of both, but most importantly it should be... “it depends”. It depends on your infrastructure needs and workload spread across the organisation.

“All of your infrastructure can be virtualised”, that’s the message that is given out by industries keen to win your business;

The Challenge... How do you gain an unbiased view of your infrastructure today and a view through capacity planning of what it could look like if virtualisation is implemented? Does your business need everything to be virtualised - we can design a balance between the best TCO and performance levels and only virtualise the necessary and practical elements of your infrastructure.

Keltec Virtualisation Readiness Service Description.

We provide a Virtualisation Readiness Service that will assess your current infrastructure using our virtualisation capacity planning tools and expert consultants. We will provide an unbiased and vendor independent view on the resource utilisation of your current infrastructure and advise on and report exactly how virtual you actually need to be. We will use our virtualisation model tailored to your specific infrastructure needs. We will provide you with a real world TCO difference between your current and proposed virtualised infrastructure, outlining how much you can realistically save after implementation.

Service Delivery

- Over a period of up to 30 days and covering previously agreed peak business periods, we will gather data from your server infrastructure, then analyse and model a Virtualised environment with you.
- We will provide a Gap Analysis and document your existing infrastructure.
- Deliver a Virtualisation workshop in which we will review the findings and plan with you, your virtualisation needs and advise you on the best route forward for your infrastructure.

Service Benefits

- Delivery of this service will provide you and your business with the confidence of knowing a competent partner is working with you for your virtualisation needs, with the experience, expertise and tools to deliver on time and to expectations.
- Provide an unbiased, independent discovery and view of your existing infrastructure, giving you with a clear understanding of your current and potential virtualised environment.
- A thorough capacity planning and assessment workshop that will define your actual virtualisation needs aligned to your business.
- The Confidence in knowing you can trust the experience that Keltec brings in for the Discovery/Capacity planning phase.
