## Business Continuity Planning Workshop

---

### Are your Enterprise servers a business risk!

Higher availability targets coupled with rising data volumes has led to the increased cost of infrastructure design, maintenance & support. Design and planning is often based upon unclear or unrealistic aims, and the complexity of infrastructure can lead to failings within continuity programmes.

Keltec's goal is to help you:

- Avoid overspend
- Streamline operations
- Deliver against service levels
- Minimise risk
- Ensure scalability

### Independence is the essence of truly strategic thinking

Product vendors cannot drive strategy, only point solutions. Keltec is not product led. We are free to design, remediate and optimise unbiased solutions based on your business objectives.

Our services incorporate:

- Cost effective backup and recovery across distributed multi-vendor environments
- Near-continuous availability using storage mirroring, server clustering and data replication strategies
- Regulatory compliance guidelines for data archive, retention and retrieval
- Business recovery solution design

---

### Example project:

#### Current state assessment and remediation

Gap analysis against industry best practice and "SWAT" team mobilised to fire-fight immediate issues and stabilise environment. Business requirements capture and validation leading to the deployment of an efficient and scalable backup environment.

Client able to engage a long-term managed service within agreed service levels and budget.
