Keltec Hosting Services cover both managed and dedicated hosting requirements. Our services enable you to release internal IT personnel from day-to-day system operations duties and re-deploy them on the projects that help you to support your business more effectively.

Managed hosting

Managed hosting simplifies the system maintenance challenges of carrying multiple spares of every component, the cost of 24*7 staff and recreating network infrastructure to eliminate any single point of failure.

Managed hosting from Keltec also frees up cash flow, by spreading the cost of the service on a flexible monthly basis, avoiding up front capital expenditure. Our clients benefit from Keltec's experience and expertise as a managed hosting specialist, with highly-skilled engineers available 24*7 to monitor solutions and resolve issues as quickly as possible.

Dedicated hosting

For customers who require dedicated hosting for reasons of security or performance, Keltec provides a portfolio of services for all applications. Dedicated servers provide you with more resources, scalability, flexibility, security and performance for mission critical websites and applications.

Keltec only uses HP and Sun systems and any server is supplied fully-configured with software fully installed and security hardened by our experts. Our server management platforms pro-actively monitor your server 24*7 to ensure maximum availability and to manage planned downtime with minimal disruption to your business.

Technology expertise and resilience

Our customers benefit directly from Keltec's partnerships with technology industry-leaders, including Cisco, HP, Microsoft, Oracle and Sun. These technology partnerships enable Keltec to collaborate on the best solutions, tools and procedures needed to deliver superior support services, saving your internal resources and costs and reducing the overall risk to your business of failure in your IT operations.

All servers are connected with a fully burstable network connection to tier 1 bandwidth providers.

Keltec also provides powerful management software that includes an easy to use web portal to simplify the task of managing your application platform or web server.

Your server is housed and managed within secure datacentre facilities with redundancy and backups in every aspect of the infrastructure to provide continuous availability in most circumstances.

24*7 support

With Keltec hosting services you benefit from 24*7 support for your systems and our fully-managed service means that we ensure your server keeps working effectively so that you can concentrate on growing your business.
